### PLEASURE FOUND IN VEGETABLE GARDEN

Farmer at Work With Corn Seed Drill.

a pleasure rather than a burden.

start with a well-thought-out plan, and study the business until we become enthusiastic, and take a pride and inraising of sheep. They have proved terest in the work. rate with their means, and their farm

supply is exhausted. It is good practice to consult with some of the sucand get all the points possible.

They make a study of the business in order that they may take advantage of any new improvements and grow varieties adapted to local conditions. Such men will give us valuable information about new things which they have tested.

It is not easy to make a garden in one year, although one year's work, rightly done, will show good results for several years. Begin the work the previous fall; rake together refuse and put it in the compost heap; then plow the ground rather deep and leave the furrows on edge during manager of the company on a matter

Freezing, thawing and soil aeration are beneficial and destroy insects. In the spring such soils dry out in a few days and are easily prepared for

quantities of plant feed. The plants have been so changed by improved methods of selection and different en vironments that they require a great amount of plant food to reach their best possible development.

Barn manure is the best fertilizer. Chemicals are good in their place, and when used by experts produce truly wonderful results, but they are unsafe in the hands of a novice and tiny green aphis that saps the vigor should not be used until one has had of the melon or cucumber through its experience and have our soils in a foliage, their depredations advance DIDN'T NEED TO LOCK DOOR high state of fertility. It is better rapidly. to limit the size of the garden to the

amount of available manure. Before plowing in the fall make a heavy application of manure, and in find it a wriggling mass of tiny worms, the spring, after fitting the seed bed, you have a formidable guest to deal nure in the rows and hills. Failure with vegetable crops is due more to lack of manure than any other thing. ly infested, then make an emulsion of Intense cultivation during the growing season destroys the weeds and portion of one pound of hard soap.

#### WHY PIGS LOSE THEIR TAILS

Nothing Causes Trouble More Often Than Damp Bedding - Sccurs Started by Changing Feed. There are several causes that are

responsible for the loss of small pigs' tails. The tail is very tender in the first few weeks of the pig's life and several troubles will cause its loss. There is nothing that causes the oss more frequently than damp bedding, which starts a fever that ends in the loss of the tail and thereby disfigures the pig. For this reason one-third of the ration, never more, vided. dry bedding should always be pro and oats one-third. Scours also frequently mean the At foaling time cleanliness and loss of the tails of young pigs. Scours
